DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 21-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Watanabe et al, US 3,663,974.

Watanabe et al teach fabrics treated with an aldehyde and softener to reduce creasing and wrinkling of the fabric (see abstract). An example of such a process contacts mercerized cotton with 15% of a 37% solution of formaldehyde and 2% silicone softener. The fabric is then passed through a chamber containing hydrogen chloride gas to catalyze the reaction between the fibers and the formaldehyde (col. 5, example 1). Note that rayon fibers are also treated by this process (col. 6, example 3). With respect to fabric properties such as press value and warp shrinkage, the examiner maintains that as the fabrics of applicants' invention and the prior art are treated by an identical process, the fabrics of the prior art will inherently possess those presently claimed properties. As this reference meets all material limitations of the claims at hand, the reference is anticipatory.

3. Claims 21, 22, and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Payet, US 3,960,482.

Payet teaches fabrics treated with formaldehyde and softener to reduce creasing and wrinkling of the fabric (see abstract). An example of such a process contacts cotton with catalyst, formaldehyde, and a fabric softener (col. 8, example 2). As this reference meets all material limitations of the claims at hand, the reference is anticipatory.

4. Claims 21, 22, and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by . Lauchenauer, US 3,807,952.

Lauchenauer teaches fabrics treated with an aldehyde and softener to reduce creasing and wrinkling of the fabric (see abstract). An example of such a process contacts mercerized cotton with 100 g of a 36% solution of formaldehyde and 30 g fabric softener (col. 6, example 2). Note that rayon fibers may also be treated by this process (col. 5, line 32). As this reference meets all material limitations of the claims at hand, the reference is anticipatory.

5. Claims 21, 22, and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Hendrix et al, US 4,396,390.

Hendrix et al teach fabrics treated with an aldehyde and softener to reduce creasing and wrinkling of the fabric (see abstract). An example of such a process contacts a polyester/cotton blend fabric

with 65 parts formalin (38% formaldehyde) and 20 parts fabric softener (col. 4, lines 19-30). As this reference meets all material limitations of the claims at hand, the reference is anticipatory.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles Boyer whose telephone number is (703) 308-2524. The examiner can normally be reached on Monday-Friday from 9:30 AM - 6:00 PM.

If reasonable attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta, can be reached on (703) 308-4708. The fax phone number for this Group is (703) 872-9310 for non-after-final amendments and (703) 872-9311 for after-final amendments.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0661.
